

# Kryterion's No Cost Publishing

Kryterion does not charge test publishing fees. Plain and simple. Where others charge for publishing, updating, and correcting assessments, Kryterion has a different philosophy; it's your exam, and you should be able to publish and edit it as you please. Without having to pay. This is one of Kryterion's core competencies and one that, frankly, we don't understand why others don't share.

## Cost Efficiency

**Test Setup Cost Savings:** Unlike other providers, we don't charge high fees, or any fees for that matter, for test publishing. Kryterion removes this financial barrier, enabling organizations to allocate resources where they can be used more effectively, such as marketing their certification programs or improving the test content.

**Increased Scalability, No Additional Costs:** No matter how large your organization is or how many test-takers you work with, you never have to worry about additional publishing fees. You can publish and update your exams as much as you want without worrying about the cost.

## Operational Flexibility

**Unlimited Free Publishing and Updates:** Do you make frequent updates or corrections to your assessments? Well, you shouldn't be penalized for wanting to make sure your exams remain current, accurate, and aligned with new industry standards.

**Rapid Exam Deployment:** No fees means no delays. Get your tests up and running quickly and without hassle. You don't need to wait for budget approval or additional funding just to make sure you are putting forth the best exam possible.

## Enhanced ROI for Certification Programs

**Maximized Revenue Potential:** By eliminating publishing fees, test organizations are able to capture a greater portion of the revenue generated from their test-takers. Less money spent, more money received.

**Competitive Pricing Advantage:** By having lower operational costs, organizations can offer more competitively priced certifications. This, in turn, can attract more candidates and increase your return on investment.
